

Project Name:

### Non-Oomycete Root and Crown Rot Efficacy (Fusarium Efficacy, Rhizoctonia Efficacy, Sclerotium Efficacy, Thielaviopsis Efficacy)

New		Ongoing	X	Completed		Duration if ongoing or completed:	2012-2013, 2018-2021
-----	--	---------	---	-----------	--	-----------------------------------	-------------------------

#### **Project Description:**

This project arose out of the 2011 IR-4 Ornamental Horticulture Workshop as one of several projects focusing on root diseases. *Fusarium* and *Pythium* were the two pathogen genera chosen for study. *Fusarium* species can infect roots, crown and stems causing root and crown rots and canker diseases.

#### **Research Project Abstract (if available):**

##### *Abstract from 2020 Fusarium Efficacy Summary & Literature Review*

From 2001 to 2019, numerous products representing 40 active ingredients were evaluated in greenhouse and field trials as soil drench, soil incorporation, foliar,in-furrow, drip irrigation or tuber soak applications against several *Fusarium* species causing rots (crown, stem and tuber rots) and wilt on ornamentals, and wilt and root rot on vegetables. *Fusarium* species tested included: *F. avenaceum*, *F. commune*, *F. oxysporum*, *F. solani* and *F. sp.* Most trials were conducted on *F. oxysporum* on larkspur, liriope, lisianthus and watermelon. Although there were insufficient data for definitive conclusions, several relatively new products showed promising, though inconsistent, efficacy comparable to the standards. These include Picatina/Adepidyn/Miravis (pydiflumetofen), Heritage (azoxystrobin), Compass (trifloxystrobin), Hurricane (fludioxonil+mefenoxam), Insignia (pyraclostrobin), Insimmo (acibenzolar), Postiva/Miravis Duo (pydiflumetofen + difenoconazole), SP2169, Tourney (metconazole) and Trinity (triticonazole). Astun, Broadform, BW240/RootShield Plus (*Trichoderma harzianum* & *T. virens*), CG100 (caprylic acid), Mural, Orkestra, Pageant (boscalid+pyraclostrobin), Palladium (cyprodinil+fludioxonil) and SP2550 provided no to mediocre efficacy. Proline (prothioconazole) provided consistently good control of *F. oxysporum* in watermelon trials. The established standards 3336, Medallion and Terraguard generally provided inconsistent efficacy.

##### *Abstract from 2020 Rhizoctonia Efficacy Summary & Literature Review*

From 1999 to 2019, numerous products representing 48 active ingredients were evaluated in several greenhouse experiments as soil drench, soil incorporation, foliar or soak application, and in 2 field trials as soil drench, against *Rhizoctonia solani*. Trials were conducted on begonia, chrysanthemum, garden impatiens, petunia, poinsettia, snapdragon, viburnum and zinnia. The relatively new registered products Affirm/Endorse/Veranda O (polyoxin D), Empress Intrinsic (pyraclostrobin), Heritage (azoxystrobin), Medallion (fludioxonil), Mural (azoxystrobin + benzovindiflupyr) and Pageant Intrinsic (pyraclostrobin + boscalid) showed excellent efficacy. Although there were insufficient data for definitive conclusions, BAS 703/Orkestra, BAS 750, Broadform, Compass, Disarm, Hurricane, Picatina, Promax, Prostar, Tourney and Trinity generally provided good to excellent efficacy, while Astun, SP2700, and ZeroTol generally provided poor to mediocre efficacy. The biological products Actinovate, Howler, IT-5103, MBI-110/Stargus, MBI-601, Pvent, RootShield PLUS and SoilGard also provided mediocre to excellent efficacy in limited number of tests. Of the established standards, Terraclor generally provided good efficacy, while 3336 generally provided inconsistent efficacy.

##### *Abstract from 2020 Thielaviopsis Literature Review*

From 2003 to 2018, numerous products representing 31 active ingredients were evaluated in greenhouse trials as soil drench against *Thielaviopsis basicola* causing black root rot on ornamentals. Although there were insufficient data for definitive conclusions, two new experimentals (BAS 750 - mefenentrifluconazole) and A20808C showed promising efficacy comparable to the standards. Several products that are not yet labeled for *Thielaviopsis basicola* also showed promising efficacy in single trials. These include Empress Intrinsic (pyraclostrobin), Endorse/Veranda O (polyoxin D), Mural (azoxystrobin + benzovindiflupyr), Picatina Flora (Pydiflumetofen + fludioxonil), Stargus (*Bacillus amyloliquefaciens* strain F727), Tourney (metconazole) and Vital (potassium phosphite). The established standards 3336 and Terraguard generally provided excellent efficacy.

#### **Target Species (Phytotoxicity, or common and Latin name of arthropod, pathogen, weed):**

<i>Chalara elegans</i>	<i>Fusarium oxysporum</i>	<i>Rhizoctonia solani</i>
<i>Fusarium avenaceum</i>	<i>Fusarium solani</i>	<i>Sclerotium rolfsii var delphinii</i>

Page 3 of 7

No longer available for development		CG100 SP2169	
* IR-4 Data contributed to registration decision – either adding pest to label or not pursuing further research			
1 At least one species screened fully			

Area	Characteristic	Pro	Con
Availability & effectiveness of alternative management tools	New unregistered active ingredients	x	
	Wide range of FRAC mode of actions to test, including biologicals	x	
	Alternative application methods	x	
	Loss of methyl bromide – need alternatives	x	
	Fusarium diseases impact different portions of plant tissues necessitating different application patterns and protocol refinements		x
	Many labels already list Fusarium diseases generally without detailing species		x
	Biopesticides better as preventative		x
	Multiple applications considerations required		x
Damage potential of target	Fusarium and Thielaviopsis root and crown diseases remain major issues	x	
Performance and crop safety of proposed products (from other systems)			
Compatibility with IPM, resistance management programs			
Economics			
Geographic distribution			
Manufacturer interest in labeling products			
Other			

### IR-4 Efficacy Trials to Date

Average rating on a scale of 1 – 5 with 1 = 0 to about 50% efficacy (not effective) and 5 = 95 to 100 efficacy (very effective); minimum to maximum rating; number of trials (See table on next page). For product/insect combinations that are blank, IR-4 has not screened this combination.

'Labeled' indicates that this disease species or genera is listed on the label. A rating of 2 or lower is considered unacceptable efficacy (**red text**). A rating of 3 or higher is considered commercially acceptable (black text). Non-labeled, completed product/disease combinations (3 or more trials) with an average rating of 3 or higher are highlighted with **green text**. For disease/product combinations that are blank, IR-4 has not screened this combination.

## Registered and Experimental Products for Non-Oomycete Crown & Root Rot Management\*

Page 3 of 3

FRAC Class	Products (Active Ingredients)	Registered Use Site(s)	REI	Application Method	Crown, Stem & Root Rot Efficacy				
					Fusarium	Rhizoctonia	Sclerotinia	Sclerotium	Thielaviopsis
-	MBI 601	TBD	-	S	-	P-E	-	-	P-F
-	CG100 (caprylic acid)	TBD	-	D	G	-	-	-	-
				Sp	G	-	-	-	-
-	SP2480 (SP2480)	TBD	-	D	P-G	-	-	-	-
-	SP2550 (SP2550)	TBD	-	D	P	-	-	-	-
-	SP2700 (SP2700)	TBD	-	D	P-G	P-G	-	-	P
-	SP2770 (SP2770)	TBD	-	D	-	Ps	-	-	-
-	TCX2020 (TCX2020)	TBD	-	D	P-G	-	-	-	P-F

Registered Use Sites: G = Greenhouse; L = Lath House; I = Indoors; N = Nursery; S = Shade House; TBD = To Be Determined

Application Method: D = Drench; S = Spray, Di = Dip, Sp = Sprech

Efficacy: E = clearly statistically equivalent or better than untreated non-inoculated and/or clearly statistically different than untreated inoculated; G = statistically different from untreated inoculated and untreated non-inoculated; F = statistically equivalent to both untreated inoculated and untreated non-inoculated; P = statistically equivalent to untreated inoculated. For trials without non-inoculated check, efficacy determined on author's conclusions, % control or comparisons to standard product(s).

Efficacy ratings taken from 2020 IR-4 Fusarium efficacy summary, 2021 IR-4 Rhizoctonia efficacy summary, 2021 IR-4 Thielaviopsis efficacy summary, 3 2020 IR-4 reports and 7 2017-2018 PDMR reports.

\* Crown and root rots caused by fungi other than Phytophthora and Pythium (*Armillaria*, *Cylindrocladium*, *Cylindrocarpon*, *Fusarium*, *Myrothecium*, *Rhizoctonia*, *Sclerotinia*, *Sclerotium*, *Thielaviopsis*)

<sup>a</sup> Empress Intrinsic has replaced Insignia for use in production environmental horticulture crops applied as drench to control soil-borne diseases caused by *Fusarium*, *Phytophthora*, *Pythium* and *Rhizoctonia* spp.

<sup>b</sup> PlantShield is only registered in a few states.
