Abstract

Oxyfluorfen (Goal 2XL) has been registered in the United States since 1979 (Goal 2E) for uses in and around ornamental plants in production nurseries and in landscapes. The label recommends over-the-top or directed spray to conifers, with a precaution not to make over-the-top application during periods of active conifer growth. It is registered for field-grown deciduous trees used only as a directed spray to soil beneath the trees. Between 1976 and 1997, the IR-4 Project conducted over 905 trials using two granular formulations (Goal 1G, Goal 2G), a liquid formulation (Goal 2E) and two wettable powder formulationss (Goal 25WP, Goal 30WP). This report is the first summary across all the available data generated through IR-4.

Thirty-nine plant species or genera exhibited no or minimal, transitory phytotoxicity to over-the-top applications of Goal 1G and Goal 2G formulations. Of these, 8 species are already registered for Goal 2XL.

Three species exhibited no phytotoxicity with over-the-top Goal G applications at 1.0 and 2.0 lb ai per acre, but significant phytotoxicity occurred at 4.0 and 8.0 lb ai per acre

Thirteen crops demonstrated significant phytotoxicity at all tested rates of Goal 1G or 2G. Of these crops, two deciduous crops are are already registered for Goal 2XL applied only as directed spray.

Goal 2E or 25/30WP applied over-the-top exhibited no or minimal negative impact on eight conifers and only three other plant species. Five of these conifers are already registered for Goal 2XL.

One species exhibited no phytotoxicity with over-the-top Goal 2E or 25/30WP over-the-top applications at at 1.0 or 2.0 lb ai per acre, but significant phytotoxicity occurred at 4.0 and 8.0 lb ai per acre.

Twenty-seven crops exhibited significant damage at all tested rates of Goal formulations applied as liquid spray over-the-top. Of these crops, one deciduos species is already registered for Goal 2XL applied only as directed spray.

Introduction

Oxyfluorfen (Goal 2XL) has been registered in the United States since 1979 (Goal 2E) for uses in and around ornamental plants in production nurseries and in landscapes. The label recommends over-the-top or directed spray to conifers, with a precaution not to make over-the-top application during periods of active conifer growth. It is registered for field-grown deciduous trees used only as a directed spray to soil beneath the trees. Between 1976 and 1997, the IR-4 Project conducted over 905 trials using two granular formulations (Goal 1G, Goal 2G), a liquid formulation (Goal 2E) and two wettable powder formulations (Goal 25WP, Goal 30WP). This is the first summary across all the available data generated through IR-4. This document will lead to amendments placing new crops on the Goal 2XL as well as provide supporting information for registration of a granular label applied over-the-top.

Materials and Methods

Because this research was conducted over several years with different protocols, application rates and whether repeat applications were made varied. Rates ranged from 0.25 to 8 lb ai per acre and either 1 to 4 applications were made. Typically, treatment was a single application of 1.0, 2.0, 4.0 and 8.0 lb ai per acre applied over-the-top, plus a water treated control for spray applications. Two researchers also applied Goal four times at 2-3 months intervals. A minimum of three plants (replicate treatments) were required with many researchers exceeding this minimum. Phytotoxicity was generally recorded on a scale of 0 to 10 (0 = No phytotoxicity; 10 = Complete kill) at various intervals from 1 to 5 months after application. A researcher also took readings one year after application.

Goal formulations were supplied to researchers (See list of researchers in Appendix 2) by Rohm & Haas.

Results and Summary

Based on the type and nature of injury seen with pendimethalin applications, tested plant species were placed into three categories: 1) no significant phytotoxicity or growth differences from the untreated check or any injury was transitory, 2) significant injury sufficient to recommend growers not utilize this product, and 3) more data is needed to make informed recommendations.

Phytotoxicity of Goal 1G and Goal 2G Formulations

In general, Goal G formulations applied over-the-top exhibited no or minimal negative impact on 11 conifers and 28 other plant species (Table 1). Of these crops, 8 species are already registered for Goal 2XL. Some minimal injury may be acceptable for growers if applications are made several weeks to months in advance of crop sale particularly for woody ornamental crops. For 2 crop species, there was no or little injury exhibited at 1.0 and 2.0 lb ai per acre, but significant phytotoxicity occurred at 4.0 and 8.0 lb ai per acre (Table 2).

Thirteen crops exhibited sufficient damage to not recommend Goal G formulations applied over-the-top: *Acer ginnala*, *Achillea millefolium*, *Aucuba* sp., *Cornus florida*, *Cornus sericea*, *Cornus stolonifera*, *Cortaderia* sp., *Delphinium* sp., *Liriope* sp., *Malus sieboldii*, *Myoporum parvifolium*, *Papaver orientale*, *Quercus borealis*, *Rhododendron* sp. 'Hinodigeri', *Viburnum opulus*, *Viburnum* sp. (Table 3). Of these crops, *Cornus florida* and *Malus sieboldii* are already registered for Goal 2XL applied only as directed spray.

In Table 4, 119 ornamental genera or species are listed where only 1 or 2 trials were conducted through IR-4 or data from 3 or more trials indicated mixed results, i.e., no injury in some trials and significant injury in others. Of these crops, 9 are already registered for Goal 2XL. The 86 crops with asterisks exhibited no or minimal transitory injury.

Please see Table 9 for a list of research on Goal G formulations and a summary of the individual trial results.

Phytotoxicity of, Goal 2E and Goal 25/30WP Formulations

In general, Goal formulations applied as liquid mixtures over-the-top exhibited no or minimal negative impact on eight conifers and only three other plant species (Table 5). Five of these conifers are already registered for Goal 2XL. Some minimal injury may be acceptable for growers if applications are made several weeks to months in advance of crop sale particularly for woody ornamental crops. For *Gardenia* sp., there was no or little injury exhibited at 1.0 or 2.0 lb ai per acre, but significant phytotoxicity occurred at 4.0 and 8.0 lb ai per acre (Table 6).

In the IR-4 research program, 27 crops exhibited sufficient damage to not recommend Goal formulations applied as liquid mixtures applied-over-the top (Table 7). Of these crops, *Malus sieboldi* is already registered for Goal 2XL applied only as directed spray.

In Table 8, 96 ornamental genera or species are listed where only 1 or 2 trials were conducted through IR-4 or data from 3 or more trials indicated mixed results, i.e., no injury in some trials and significant injury in others. Of these crops, 20 are already registered for Goal 2XL. The 43 crops with asterisks exhibited no or minimal transitory injury.

Please see Table 10 for a list of research and a summary of the individual trial results with Goal 2E and WP formulations.

Label Suggestions

Data from over 564 trials with oxyfluorfen granular formulations indicate that a Goal G label applied over-the-top would be safe for a wide variety of ornamental species. It is suggested that the following 39 genera or species exhibiting no injury in these experiments be registered for a Goal G over-the-top application. In addition, the conifers registered under the current Goal 2XL label, with the existing use directions and safety precautions, may be added to a future Goal G label.

Conifers:

Juniperus chinensis
Juniperus compacta
Juniperus horizontalis
Juniperus sp.
Pinus thunbergii
Podocarpus macrophyllus
Taxus cuspidata
Taxus intermedia
Taxus media
Taxus sp.
Tsuga canadensis

Other Plants:

Ajuga reptans
Aquilegia sp.
Buxus microphylla
Buxus sp.
Cornus sericea
Cotoneaster apiculata
Cotoneaster dammeri
Cotoneaster sp.
Euonymus fortunei
Forsythia intermedia
Forsythia sp.
Gardenia sp.
*Hedera helix L. ssp. *Helix**
Hibiscus rosa-sinensis
Ilex cornuta
Ilex crenata
Ilex sp.
Lagerstroemia indica
Ligustrum japonicum
Ligustrum ovalifolium
Ligustrum sp.
Pachysandra terminalis
Paeonia sp.
Photinia fraseri
Pyracantha coccinea
Rhododendron indicum 'President Clay'
Rhododendron sp. 'Hershey Red'
Rhododendron sp. 'Hinocrimson'

IR-4 has very limited data for following list of 80 plants. However, if other available data demonstrate no or minimal transient injury for these crops, IR-4 supports placing these on a Goal G label also.

<i>Acer palmatum</i>	<i>Liatris</i> sp.
<i>Achillea ptarmica</i>	<i>Ligustrum amurense</i>
<i>Astilbe</i> sp.	<i>Ligustrum lucidum</i>
<i>Buxus koreana</i>	<i>Ligustrum obtusifolium</i>
<i>Buxus sempervirens</i>	<i>Lonicera tartarica</i>
<i>Callistemon citrinus</i>	<i>Malus</i> sp. 'MM106'
<i>Calluna</i> sp.	<i>Nandina domestica</i>
<i>Camellia japonica</i>	<i>Nerium oleander</i>
<i>Carissa grandiflora</i>	<i>Philadelphus</i> sp.
<i>Caryopteris clandonensis</i>	<i>Picea</i> sp.
<i>Chamaecyparis lawsonia</i>	<i>Pieris</i> sp.
<i>Chrysanthemum</i> sp.	<i>Pinus</i> sp.
<i>Cleyera japonica</i>	<i>Pittosporum tobira</i>
<i>Coronilla varia</i>	<i>Potentilla aurea verna</i>
<i>Cotoneaster adpressus</i>	<i>Potentilla verna</i>
<i>Cotoneaster congestus</i>	<i>Prunus domestica</i>
<i>Cotoneaster glaucophylla</i>	<i>Prunus</i> sp 'Mahaleb Cherry'
<i>Cupressus sempervirens</i>	<i>Pyracantha fortuneana</i>
<i>Dianthus caryophyllus</i>	<i>Pyracantha koidzumii</i>
<i>Dianthus</i> sp.	<i>Pyracantha</i> sp.
<i>Dodonaea viscosa</i>	<i>Raphiolepis indica</i>
<i>Elaeagnus macrophylla</i>	<i>Rhododendron catawbiense</i> 'Roseum Elegans'
<i>Elaeagnus pungens</i>	<i>Rhododendron chionoides</i>
<i>Elaeagnus</i> sp.	<i>Rhododendron gandavense</i>
<i>Euonymus alatus</i>	<i>Rhododendron</i> sp. 'Fashion'
<i>Euonymus japonica</i>	<i>Rhododendron</i> sp. 'Louise'
<i>Euonymus x intermedia</i>	<i>Rhododendron</i> sp. 'Rosebud'
<i>Forsythia suspensa</i>	<i>Rhododendron</i> sp. 'Stewartsonian'
<i>Forsythia</i> sp.	<i>Rosa</i> sp.
<i>Gardenia</i> sp.	<i>Syzygium paniculatum</i>
<i>Gypsophila elegans</i>	<i>Thuja</i> sp.
<i>Gypsophila paniculata</i>	<i>Viburnum lentago</i>
<i>Gypsophila</i> sp.	<i>Viburnum plicatum</i>
<i>Hemerocallis</i> . <i>fulva</i> and <i>flava</i> hybrids	<i>Viburnum suspensum</i>
<i>Ilex vomitoria</i>	<i>Viburnum wrightii</i>
<i>Juniperus pfitzeriana</i>	<i>Vinca minor</i>
<i>Juniperus torulosa</i>	<i>Vinca</i> sp.
<i>Juniperus wiltonii</i>	<i>Weigela florida</i>
<i>Leucothoe axillaris</i>	<i>Weigela sinensis</i>
<i>Leucothoe catabaei</i>	

Data from over 341 trials with Goal 2E and WP formulations applied over-the-top as liquid spray indicate that a Goal label for this use may not be safe for a wide variety of ornamental species. Therefore IR-4 suggests not to label oxyfluorfen applied over-the-top as liquid spray. It is suggested that crops from the following six genera or species exhibiting no injury in these experiments be added to the current Goal 2XL label, with the existing use directions and safety precautions.

Buxus sp.
Forsythia intermedia
Ilex sp.
Juniperus sp.

Picea glauca
Pinus thunbergii

IR-4 has very limited data for following list of 30 plants. However, if other available data demonstrate no or minimal transient injury for these crops, IR-4 supports placing these on the current Goal 2XL label also.

Acer palmatum
Buxus sempervirens
Callistemon sp.
Carissa grandiflora
Chrysalidocarpus lutescens
Cupressocyparis leylandii
Cupressus sempervirens
Dodonea cuneata
*Hedera helix L. ssp. *Helix**
Hemerocallis sp.
Ilex meserve
Juniperus compacta
Juniperus pfitzeriana
Juniperus torulosa
Ligustrum ovalifolium

Malus domestica
Malus sp. 'MM106'
Matthiola incana
Nerium oleander
Philadelphus coronareus
Phlox sp.
Phoenix roebelinii
Pinus halepensis
Pyracantha sp.
Quercus sp.
Rhododendron mollis japonica
Rhododendron poukhanense 'Karen'
Rhododendron yedoense pookhanense
Tsuga caroliniana
Viburnum opulus
