

2006

ANNUAL REPORT

Providing Safe and Effective Pest
Management Solutions for
Specialty Crop Growers

ANNUAL REPORT OF THE IR-4 PROJECT (NRSP-4/IR-4)

January 1, 2006 - December 31, 2006

PROJECT: National Research Service Project No. 4 (NRSP/IR-4). IR-4 Minor Crops Pest Management. January 1, 2006 to December 31, 2006.

COOPERATING AGENCIES AND PRINCIPAL LEADERS: Cooperating agencies, principal leaders of the project, support groups and IR-4 State and Federal Liaison Representatives are shown in Attachment 1. Scientists participating in the project are shown in Attachment 2.

The IR-4 Project continues to pride itself as being a model of interagency cooperation as a federally funded program by forming close working associations with commodity growers/commodity organizations, the state agricultural experiment stations/land grant university system, the crop protection industry, our United States Department of Agriculture (USDA) funding agencies, the Agriculture Research Service (ARS) and Cooperative State Research, Education, and Extension Service (CSREES), regulatory agencies (the Environmental Protection Agency (EPA), California's Department of Pesticide Regulation and Canada's Pest Management Regulatory Agency) as well as Agriculture and Agri-Food Canada to provide the latest pest control tools to US specialty crop growers.

Background

The IR-4 Project was organized in 1963 by the Directors of the State Agricultural Experiment Stations (SAES) to facilitate regulatory clearances for crop protection chemicals on specialty or minor food crops (fruits, vegetables, herbs, etc) as well as minor uses on major crops (corn, soybean, cotton, small grains, etc.). The companies involved in developing, registering and marketing crop protection chemicals often avoid the relatively small markets associated with specialty crops because of the limited potential economic return on investment.

The objectives of the IR-4 Project were expanded in 1977 to include registration of pest control products for the protection of nursery, floral, and Christmas trees, and again in 1982 when the objective of clearance of biological control agents or biopesticides was added. IR-4 provides national program coordination, technical guidance and funding for field trials and when appropriate, laboratory research to develop residue and other data required by the EPA and the crop protection industry to register specialty crop pest management products.

The IR-4 Project is funded by the USDA in partnership with the SAES. The majority of funding for the IR-4 Project has been through the CSREES. The ARS established a companion minor use program in 1976 to provide further program support. The SAES contributes some financial resources through Multi-state Research Funds (Hatch) and a significant amount of in-kind contributions by housing IR-4 infrastructure throughout the United States. The crop protection industry also contributes financial in-kind resources.

Further details on the IR-4 Project can be found on the IR-4 Project's website: <http://ir4.rutgers.edu>

Food Use Program

The regulatory approval of crop protection chemicals on food crops continues to be the largest single effort of the IR-4 Project. Requests for assistance for registration of new pest management tools on specialty crops are received from growers, commodity groups, university researchers and extension personnel, USDA researchers and other interested parties through submission of a Project Clearance Request. Only new requests that have received consent from the crop protection industry are considered. Potential projects are prioritized by stakeholders at the annual IR-4 Project Food Use Workshop. Due to resource constraints, only a limited number of projects are given a high priority and scheduled for

research in a given year. A research protocol is developed and research is assigned to IR-4 Field Research Centers and Analytical Laboratories at the SAES or USDA-ARS facilities. When necessary, cooperating facilities outside the IR-4 Project infrastructure are utilized. All IR-4 food use residue research is conducted under EPA approved Good Laboratory Practice Regulations (GLPs) with study oversight by the IR-4 Quality Assurance Unit. In most studies, the chemical is applied in the field in a manner that simulates grower use of the product on the target specialty crop. When the crop is mature, samples of the crop are harvested and shipped to the analytical laboratory where the amount of chemical remaining in or on the crop is determined. Data from this research is put into a regulatory package and submitted to the EPA. EPA reviews the data, establishes a pesticide tolerance and approves the company's registration amendment.

Since 1963, there have been 9898 IR-4 food-use requests submitted by stakeholders. Of these, 1061 are considered researchable projects while the remainder have been addressed through research programs and clearances. In 2006, there were 171 new requests submitted and SAES and USDA-ARS cooperators scheduled research on 95 requested projects (studies) which represented 610 field trials. Research protocols were prepared for each study. The chemicals and commodities researched in 2006 are shown in Attachment 3.

Now that EPA has fully implemented the Pesticide Registration Improvement Act (PRIA), and IR-4 has revised its submission processes as required under PRIA, IR-4 is realizing significant benefits. These not only include a greater number of registrations, but also a more predictable timetable for EPA decisions. IR-4 reached a record of specialty crop new uses in 2006. EPA established a total of 189 permanent tolerances based on IR-4 submissions which accounted for over 50% of all new tolerances issued by EPA in 2006. These tolerances, considering crop grouping and crop definitions, will support up to 804 new specialty crops on product labels. This is a nearly 30% increase over the number of new uses approved in 2005. A complete list of these new uses can be found in Attachment 4.

IR-4 submitted 176 data packages in 2006 to the EPA or the registrants to support new registrations (see Attachment 5). This was a 50% increase in the number of submissions compared to 2005 (when 115 submissions were made) and exceeds the previous record set in 2002 by 26 petitions. This considerable increase is due to the dedication and hard work of IR-4 colleagues across the US as well full implementation of the new PRIA procedures and the excellent support by many IR-4 cooperating registrants. Additionally, almost all of these petitions were submitted electronically. These electronic submissions enable the EPA to review IR-4 petitions more rapidly and with fewer resources. The current number of projects that IR-4 has in line for submission to EPA in 2007 and beyond is 278 (see Attachment 6).

It is expected that the Agency will be maintaining its level support for IR-4 with approximately 50% of new uses being credited to IR-4 submissions. EPA now has a Multi-Year work plan that includes IR-4 pending submissions and can be reviewed at: <http://www.epa.gov/opprd001/workplan/newuse.htm>. The EPA current work plan includes over 200 IR-4 submissions scheduled for review through June of 2008. EPA continues to work through its backlog of IR-4 submitted petitions, and it is likely that by mid-2008 this backlog will be eliminated.

The California Department of Pesticide Regulation (CDPR) continues to provide support to the EPA workshare program and nearly 20% of new uses in 2006 were a result of CDPR's review of residue chemistry data for the EPA. CDPR contributed to IR-4 successes by reviewing five different products and 26 data packages in 2006. With regard to NAFTA joint reviews, a new framework for joint minor crop reviews between the EPA and Canada's Pest Management Regulatory Agency (PMRA) was implemented in 2005 and became a standard operating procedure in 2006 when EPA and PMRA completed two reports that were submitted in 2005. In 2006, eight projects were submitted for joint review and decisions should be completed in early to mid 2007. The minor use joint review process stipulates an eight month review timeline, which reduces the timeline by nearly half of typical reviews. It is expected that as many as 15 joint minor use reviews will eventually take place each year between the EPA and PMRA, with the final result of providing simultaneous registrations on new products in both

countries. These efforts, along with support from CDPR, help to provide more resources to EPA, resulting in even more IR-4 project completions.

IR-4 continues to look for other efficiencies to gain even greater numbers of registrations. The Registration Team at IR-4 Headquarters is now submitting essentially all new petitions electronically to the EPA and is using the EPA requested format for final reports. This report format is also acceptable for Canadian, EU and Codex submissions. It is anticipated that using electronic submissions and the EPA requested formatting may save as much as 35% of the Agency's review time and resources and can more easily be used for Joint reviews with Canada or international submissions.

Annual training of the Field Research Directors, laboratory personnel and other staff involved in the Food Use Program is essential to the success of the IR-4 Project. A major GLP training meeting, the National Education Conference, was held from February 28th to March 2nd, 2006 in Phoenix. The results of the conference (Phoenix Proceedings February 2006) are posted on the IR-4 Website (<http://ir4.rutgers.edu>). On June 21, 2006, IR-4 sponsored the 10th in a series of educational tours for EPA/USDA/IR-4 attendees titled "Ornamental Horticulture – Straddling the Mason-Dixon" focusing on the ornamental and "Green" industries.

Ornamental Horticulture Program

The ornamental industry is an extremely important component of specialty crop agriculture with over \$15 billion in annual sales which nationwide comprise over 35% of all specialty crop sales. The industry presents a formidable challenge since it involves a diverse array of crops in various markets such as flowers, bulbs, houseplants, perennials, trees, shrubs and more, grown in greenhouses, nurseries, commercial and interior landscapes, Christmas tree farms, sod farms, etc.

Requests for assistance, priority setting and assignment of research are similar to the Food Use Program. However, research in the Ornamental Horticulture area is mainly to determine plant safety or efficacy of products on pests; there is no laboratory analysis involved. All data are submitted to the cooperating product registrant, and if appropriate, they request that EPA approve a modification of their product's registration.

In 2006, IR-4 conducted over 1300 ornamental horticulture research trials to support registrations in the greenhouse, nursery, landscape, Christmas tree, and forestry industries. Of these 540 were efficacy trials designed to compare different management tools to manage pests and diseases and to measure impact of growth regulators; the remaining trials were conducted to determine the level of phytotoxicity to crops with herbicides used to manage common weeds in and around nurseries. Please see Attachment 7 for summary of 2006 research activities.

During 2006, one new label registration was granted for use on ornamental horticulture crops from data generated through the Ornamental Horticulture Program: Insignia (pyraclostrobin). During 2004 and 2005, 13 trials were conducted with Insignia to demonstrate efficacy on *Phytophthora* species.

Also in 2006, 2 special local needs state registrations were granted for Outlook (dimethenamid-p) for use in forestry seedling nurseries. IR-4 conducted 5 trials with Dr. Richard Garrett in 2000/2001 to examine crop safety with Outlook on 5 seedling species.

Eight data summaries were compiled based upon research reports submitted by researchers from 1976 through 2005. These reports were Scale and Mealybug Efficacy, Phytophthora Efficacy, Quinoclamine Crop Safety, Pendimethalin Crop Safety, Trifluralin + Isoxaben Crop Safety, S-Metolachlor Crop Safety, Bentazon Crop Safety and Prodiamine Crop Safety. Please see Attachment 8 for a complete listing of studies included in these summaries and sent to the respective manufacturers.

The table below summarizes both the registration impact and program activities for 2006.

Category	2006		
	Efficacy	Crop Safety	Total
Number of Studies (PR Numbers) with Planned Trials	373	461	834
Number of Planned Trials	565	834	1399
Number of Cancelled Trials ^a	24	18	42
Number of Trials in Progress ^a	397	423	820
Number of Completed Trials ^a	144	393	537
Number of New Product Registrations ^b	1	0	1
Number of State Registrations ^c	0	2	2
Number of Trials Contributing to Registrations ^d	13	5	18
Number of Research Summaries ^e	2	6	8
Number of Trials Contributing to Summaries ^f	231	1143	1374

^a Known when this report was compiled, 2/5/07. Note: many reports were received during January 2007 and had not been fully processed prior to when this report was written.

^b New products for the ornamental horticulture industry based on data collected through IR-4 and submitted to manufacturers in previous years. In 2006, IR-4 data contributed to refining rates on one new product: Insignia (pyraclostrobin).

^c State registrations and special local needs registrations on federally registered products for the ornamental horticulture industry based on data collected through IR-4 and submitted to manufacturers in previous years. In 2006 2 SLNs for Outlook (dimethenamid) were granted for use in forestry seedling nurseries in OR and WA.

^d The total number of trials where data was utilized for registrations. In 2006, 13 efficacy trials and 5 crop safety trials contributed to Insignia and Outlook registrations, respectively.

^e IR-4 data summaries compiled from research reports on select projects. In 2006, 8 summaries were compiled: Phytophthora Efficacy, Scale and Mealybug Efficacy, Quinoclamine Crop Safety, Trifluralin + Isoxaben Crop Safety, Pendimethalin Crop Safety, S-Metolachlor Crop Safety, Bentazon Crop Safety, and Prodiamine Crop Safety.

^f The total number of trials contributing to the IR-4 data summaries. In 2006, 1374 trials contributed to the writing of the data summaries. Of these, approximately 1000 will impact product label registrations; the remainder are already registered on the respective labels or will be used for technical literature.

Biopesticide Program

The IR-4 Biopesticide Program has the goal of facilitating the registration of crop protection products classified by EPA as being regulated as Biopesticides. IR-4 has four major functions in the biopesticide arena:

- A grants program to fund early stage biopesticide proposals - for products whose core data packages have not yet been submitted to EPA
- A grants program to fund advance stage biopesticide proposals - for products that have been registered by EPA or are in the registration process and additional data is needed to assist with expansion of the registration to new crops or to new pests
- A grants program to fund large scale demonstration plots to gather information and provide outreach indicating that biopesticides can be a useful tool in pest management systems.
- A registration assistance program – to provide small biopesticide companies with regulatory advice and petition preparation assistance.

In 2006, IR-4 submissions to EPA resulted in an exemption from the requirements of a tolerance for Sorbitol Octanoate on 304 different crops and Eucalyptus oil for use in/on beehives (honey and beeswax) - a total of 306 new biopesticide uses (see Attachment 9).

The Biopesticide Research Program is in its ninth year of competitive grant funding of projects, amounting to over \$3,725,000 in grants to researchers since its inception. In 2006, the biopesticide grant program funded 6 Early Stage, 21 Advanced Stage and 17 Demonstration Stage projects. These were conducted at 19 different universities and USDA research units. The research involved 36 scientists and over 100 product-crop combinations. The demonstration stage grants were co-funded (\$100,000 from IR-4 and EPA) and co-reviewed by EPA and IR-4. EPA provided an additional \$100,000 Technology Transfer Grant for 3 of the demonstration projects to further develop the extension phase of those projects.

A beta release of a Biopesticide and Organic Product Label Database was performed and is undergoing additional revision. The label database was funded through an EPA Region 2 grant. It will be providing a unique resource to specialty crop growers and homeowners on the availability of alternative pest management solutions.

Crop Grouping Initiative

The IR-4 Project continues to lead an effort to expand the number and scope of crop groups. The goal of this initiative is to validate the existing member crops and representative crops within a group and when appropriate add new crops to the group. Crop groups are an efficient way to provide clearances for growers; residue work is done on a few representative crops and the pesticide tolerance is extrapolated to the other member crops of the group.

The IR-4 Crop Grouping Initiative had another successful year. The EPA's Health Effects Division Chemistry and Safety Advisory Council (ChemSAC) has reviewed, evaluated, and approved two updated crop groups (Berries and Small Fruits and Edible Fungi) that were submitted in 2005. ChemSAC also completed its Reviewer's Guide for the above two crop groups, and the Bulb Vegetables update that was approved earlier. Three new crop groups (Oilseeds, Citrus Fruits and Pome Fruits) were updated and submitted to the EPA for approval in 2006. These updates significantly expand these crop groups from 9 to 31 commodities (Oilseeds), from 12 to 27 commodities (Citrus Fruits), and from 7 to 10 commodities (Pome Fruits). At the end of 2006, the Stone Fruits group update was near completion, and the Herbs and Spices group was under revision.

To promote a harmonized crop grouping system between the US and Codex (the international standards), IR-4, representing the US Delegation to the Codex Committee on Pesticide Residues (CCPR), cooperated with the Netherlands Delegation and proposed an extended revision proposal for the Codex Classification of Foods and Animal Feeds at the 38th CCPR meeting in April, 2006. This proposal received strong support from several other Delegations including Australia, Canada, China, European Commission, India, Japan and New Zealand, and was approved by the CCPR meeting. Subsequently, the 29th Codex Alimentarius Commission (CAC) meeting approved the document regarding the extended classification revision proposal from the CCPR, and the Codex revision workgroup was established, co-lead by representatives from the Netherlands Delegation and the US Delegation (an IR-4 representative). The two representatives have drafted a revision proposal for the 39th CCPR meeting that will be held in May 2007. This revision proposes two Codex crop groups, Bulb Vegetables and Berry and Small Fruits according to the revision for the correspondent US crop groups that were updated by the ICGCC. If the CCPR and CAC approve this proposal, it will be a significant step towards harmonization.

Quality Assurance Unit

Good Laboratory Practice Standards (GLP's as noted in Chapter 40, Code of Federal Regulations, Part 160) compliance is paramount to the success of the IR-4 Project's Food Use Program. A key component of compliance is the activities of the IR-4 Project's Quality Assurance Unit (QAU). The QAU continues to provide monitoring and support to cooperating scientists throughout the United States. Audits of facilities and of ongoing field and laboratory procedures provide assurance that IR-4's data will be accepted by the crop protection industry and EPA. IR-4 QAU is comprised of Headquarters QA officers, Regional QA Coordinators, cooperating university QA officers and USDA-ARS QA officers. The IR-4 QAU functions under a set of mutually accepted Standard Operating Procedures by which it maintains

consistent monitoring activities of IR-4 GLP research studies. Representatives mutually monitor studies and coordinate activities in an efficient manner.

The Annual QA Planning Meeting was held on March 14-15, 2006 in Raleigh, NC. At this meeting the audit plan for 2006 was ascertained. For 2006, regular inspections included 22 facility inspections, over 175 field in-life inspections, 85 analytical in-life inspections, 84 analytical summary report/data audits and 622 field data book audits. During the 2006 calendar year approximately 98 final reports and amended reports were audited.

In addition to their standard duties, members of the IR-4 QAU were involved in EPA GLP compliance inspections. Four IR-4 participating field testing sites and one IR-4 analytical laboratory were audited in 2006 by the EPA for GLP compliance and data integrity. A total of 70 IR-4 related facilities have been inspected for GLP compliance since April 27, 1997.

Other Initiatives/Activities

Seed Technology Initiative:

2006 was the second year of the new initiative involving collaboration with agricultural chemical companies, University researchers and the EPA on the development and registration of products useful in the protection of germinating seeds/early season pest control by way of seed treatment. A number of companies are working with IR-4 on this new initiative and others are joining as the program develops. Several field trials were completed in 2006 that showed good efficacy in the control of cucumber beetles in pumpkin and cucumber with clothianidin, fipronil, and thiamethoxam in OH, VA and NY. Tests were also run in NY against onion maggot with good results. Results that were not promising were tests run against nematodes in cucurbits in FL and AL with oxamyl-treated seed. DuPont has since dropped this as a developmental objective.

International Activities:

With the assistance of the International Union of Pure and Applied Chemists (IUPAC) Organizing Committee, IR-4 hosted a luncheon seminar entitled "Specialty Crop Program and the IR-4 Model" at the 11th IUPAC Congress in Japan in August. Jerry Baron, Lois Rossi (Director, EPA Registration Division), and Wally Ewart (California Citrus Quality Council) provided presentations regarding "The role of the IR-4 Project in Pest Management for Horticulture Crops Grown in the United States", "Specialty crop programs and international harmonization efforts", and "Specialty crop needs for crop protection", respectively. The IR-4 seminar topics interested many people from the US and other countries and regions. Many people were very interested in the IR-4 model and expressed their desire to collaborate with IR-4 on specialty crop and minor use programs.

The Food and Agriculture Organization of the United Nations (FAO) invited a representative from the IR-4 Project to participate in the 2006 Joint Meeting on Pesticide Residue Meeting (JMPR). The Meeting reviewed 30 compounds and recommended about 200 MRLs (Maximum Residue Levels), with most of these for specialty crops. At this meeting the first IR-4 data packages submitted for JMPR review were presented. Another item of interest at of the 2006 JMPR Meeting was the increased number of acceptable extrapolations of MRLs on crop groups.

Methyl Bromide Alternatives Initiative

The IR-4 Methyl Bromide Alternatives program (MBA) was significantly reduced in 2006 since January 1, 2005 marked the official phase out date for methyl bromide usage in developed countries, except for critical use exemptions (CUE's) in a limited number of crops. IR-4's primary role was to support various commodity organizations (namely the cut flower and strawberry industries in CA) in their efforts to investigate alternatives in association with their CUE's. IR-4 MBA trials were run with Driscolls Strawberry Associates in CA, and with the cut flower industry through IR-4 support of the CA Cut Flower Commission.

IR-4 facilitated the regulatory success in 2006 with a new product, MULTIGUARD PROTECT, for soil use, and label amendments for the use of propylene oxide (PPO) for post harvest protection of dried fruit. The PPO label now allows usage on in-shell nuts, nutmeats, spices, cocoa, cocoa beans and dried fruit. IR-4 was recognized during the 2006 Methyl Bromide Alternatives Conference in Orlando, Florida as being key to the success in obtaining the dried fruit label amendment. It will serve the raisin, prune and other dried fruit commodity organizations in CA as a viable alternative to methyl bromide.

Participants in Process

- **Growers/Commodity Organizations/Food Processors** – These are the primary customers for the IR-4 Project services. A concerted effort is being made to seek additional input from this group in establishment of research priority setting policies. This is in addition to the direct feedback from the IR-4 **Commodity Liaison Committee (CLC)**. This small group of representatives of specialty crop stakeholders provides input to the IR-4 Project Management Committee on overall operations and program direction. They are often effective communicators to Congress on the importance of the IR-4 Project and its deliverables to specialty crop agriculture in the United States.
- **Crop Protection Industry** - Without the cooperation of the biopesticide and chemical companies who discover, develop, register, and market their new technologies, IR-4 would not be able to help specialty crop growers have the newest crop protection tools. IR-4 personnel continue to have managerial and technical review meetings with crop protection industry companies. In 2006, over 30 meetings were held with 23 different companies.
- **State Agricultural Experiment Stations/Land Grant Universities** – The State Agricultural Experiment Stations are the cornerstone of the IR-4 Program. This group provides a limited amount of direct support (\$481,000 through Multi-State Research Funds) plus a significant amount of resources via in-kind support by hosting and co-funding the IR-4 Field Research Sites and IR-4 Regional Offices including the analytical laboratories.
- **USDA (CSREES & ARS)** – These two units of USDA provide the majority of the direct resources that IR-4 utilizes to operate. Additionally, numerous ARS personnel are directly involved in the IR-4 research effort at three analytical laboratories and 8 field research centers.
- **Agriculture and Agri-Food Canada (AAFC) Pest Management Centre**. The partnership between IR-4 and AAFC'S Pest Management Centre continued to flourish in 2006. The two programs started 8 new research studies of mutual interest to U.S. and Canadian specialty crop growers in 2006. There are 47 cooperative projects that are in the process of being completed and submitted to both countries' regulatory agencies. These projects are the culmination of year-round efforts to work cooperatively. IR-4 staff, at the invitation of AAFC, participated in the March 2006 Canadian Minor Use Workshop. Members of the AAFC Pest Management Centre routinely join IR-4 at meetings with the crop protection industry. IR-4's summer Project Management Committee was held in conjunction with an AAFC'S Pest Management Centre meeting in British Columbia. Additionally, several AAFC team members attended the IR-4 Food Use and Ornamental Workshops as well as the National Research Planning Meeting to facilitate better cooperation. AAFC has plans to conduct 44 food use residue trials in 2007, including totally managing one cooperative study by assuming the roles of Study Director and Sponsor.
- **EPA.** - IR-4 continues to work closely with EPA to meet the needs of growers to have an arsenal of safe and effective pest management tools. The cooperation between the two groups is at an unprecedented high level. The EPA/IR-4 Technical Working Group (TWG) held three meetings this past year (a total of 30 held since the TWG was formed in 1999). Here, EPA and IR-4 staffs as well as representatives from other partners discuss new regulatory approaches and ways to enhance the ongoing petition submission/review process, as well as ways to improve regulatory efficiencies. Additionally, IR-4 is assisting EPA in their effort to update data requirements. IR-4 and EPA co-funded a study to investigate the distribution of specialty crops in the NAFTA residue regions. IR-4 is conducting research for EPA to assist in the development of a model to predict how changes in use pattern of a chemical will affect residues in the crop. As noted previously, the Biopesticide and Pollution Prevention Division of EPA is cooperating with IR-4 on funding the Biopesticide Demonstration Project.

- **Other regulatory agencies including California's Department of Pesticide Regulation (CDPR) and Health Canada's Pest Management Regulatory Agency (PMRA).** CDPR and PMRA have been active members of the TWG since 2000. They are productive contributors to the overall accomplishments as noted in the EPA section through domestic and NAFTA work share programs on IR-4 petitions. CDPR continues its commitment to provide the residue chemistry reviews for approximately 20% of IR-4 petitions, accounting for 26 data packages in 2006. PMRA staff continued to support the activities of AAFC Pest Management Centre on research projects selected to partner with IR-4 for joint resource sharing. In 2006, eight projects were submitted for joint review and decisions should be completed in early to mid 2007. EPA and PMRA completed two reports in 2006 that were submitted in 2005. The minor use joint review process stipulates an eight month review timeline, which reduces the timeline by nearly half of typical reviews. It is expected that as many as 15 joint minor use reviews will eventually take place each year between the EPA and Canada's PMRA, with the final result of providing simultaneous registrations on new products in both countries. These efforts along with support from CDPR help to provide more resources to EPA resulting in an even higher number of IR-4 project completions.

Impact

The successes, accomplishments and deliverables of the IR-4 Project have been documented by the Food Use Program, Ornamental Horticulture Program, Biopesticide Program, Crop Grouping Initiative, Quality Assurance Unit and Other Initiatives/Activities sections. Without the existence of the IR-4 Project, fewer safe and effective crop protection chemicals and biological alternatives would be available for use on food and ornamental specialty crops today.

The accomplishments of the IR-4 Project are many. There are many antidotal comments from specialty crop growers on the impact of the IR-4 Project on their business. Some have said, "Without the IR-4 Project and what they provide, my farm would be out of business". It is very difficult to get an accurate financial assessment of the impact of IR-4's efforts. However, IR-4 continues to capture the value as measured in dollars of loss avoidance that are submitted to EPA in association with state Emergency Use Exemption (Section 18's) approvals involving IR-4 data. The 2005 data where summarized and resulted in a \$1.1 billion impact with 196 Section 18's. The total over the eight year period from 1998 to 2005 where the data are available bring the total economic impact/loss avoidance to \$12.589 billion from 1,229 Section 18's covering 47 states. Please note that since 1998, 225 Section 18's have been converted to full registrations, a much more desirable type of use approval. Once this conversion occurs, state data is no longer collected on loss avoidance. Thus, the Section 18 loss avoidance data, though impressive, is a significant underestimate of the true impact of IR-4 Project's efforts on food crops. Additionally, this Section 18 data does not capture the impact in the Ornamental Horticulture area.

FY 2006 Appropriations and other funding

The IR-4 Project receives its funding from several sources. The majority of the direct funding comes in from USDA through CSREES and ARS. There are also direct contributions from the state agricultural experiment stations and gifts from industry.

The FY 2006 CSREES appropriation for the IR-4 Project was reduced to \$10,667,150 from the FY 2005 level of \$11,141,750. The amount appropriated to the USDA-ARS Minor Use Program remained at \$3,860,100. The Directors of the state agricultural experiment stations, through the Multi-state Research Funds, provided the IR-4 Project with an additional \$481,182. The commodity and crop protection industries were able to assist the IR-4 Project by providing approximately \$2,072,500 in gifts and grants. Total direct funding for the IR-4 Project during calendar year 2006 was \$17,565,932.

This value does not include the in-kind contributions provided by the crop protection industry, commodity groups and state agricultural experiment stations, which are substantial. For example, many IR-4 research units are housed on a state funded research station. The host institutions contribute indirect and direct costs to cost share on the IR-4 funds. The crop protection industry always provides characterized test substance and analytical standards to be used in residue studies and they also provide

significant technical assistance. Various commodity groups provide funding directed at specific research on new pest control tools critical for growers of their specialty crops.

Future Directions

WORK PLANNED FOR 2007

IR-4 will continue to seek input and technical guidance from all of its stakeholders, including state and federal agricultural scientists and state extension agents and specialists, commodity groups, growers, the crop protection industry, food processors, CDPR and the EPA to insure the program maintains its focus on important specialty crop needs. IR-4 goes through an extensive process, including priority setting workshops and reviewing proposals each year to obtain input on the most critical pest control needs of specialty crop producers; and to prioritize those research needs using committees of regional and national level agriculture experts to best match the program's resources with the current unmet needs.

The **Food Use Program** research for year 2007 will consist of approximately 87 studies supported by 644 field trials. This is 23 less studies and 57 fewer field trials than in 2006, and is a direct reflection of the necessity to increase federal funding to sustain the IR-4 Project.

The distribution of 2007 field trials within the IR-4 Project consists of 501 conducted by IR-4 units associated with the state agricultural experiment stations, 99 conducted by USDA-ARS and 44 by Canada. The Canadian Minor Use Program will be fully managing one of the cooperative studies, including sponsorship, study director duties and report writing. Also new for 2007 is a cooperative project with the government of Australia. They are sponsoring and conducting several field trials in Australia utilizing the IR-4 Project research protocol. We anticipate that the US data and the Australian data will be submitted to both EPA and the Australian regulatory authorities at approximately the same time. This bilateral research project will have some significant implications for further international harmonization.

IR-4 will continue its commitment to producing high quality, compliant scientific data in order to meet EPA's GLP requirements. IR-4 will continue to hold GLP and/or QA training sessions for IR-4 personnel and cooperators, audit data and reports, review and revise SOP's and strive to further enhance our effectiveness and efficiency. The IR-4 QAU will meet on March 14-15, 2007 Geneva, NY to conduct the annual QA Planning Meeting.

For the 2007 **Biopesticide Research Program**, IR-4 received a total of 64 proposals requesting approximately \$750,000. Out of the 64 proposals 14 are Early Stage, 34 are advanced Stage and 16 are Demonstration Stage proposals. Of the 64 proposals 39 involved disease management, 16 were for insect/mite management, 4 were for weed control, 1 was for nematode control, and two were to manage bird predation. Final decisions on funded proposals will be made by March 1, 2007.

In 2007, the **Ornamental Horticulture** research program will focus on the high priority projects established at the annual workshop: *Phytophthora* Efficacy, *Pythium* Efficacy, Thrips Efficacy, Coleopteran Efficacy, and 2007 Sedge Materials Crop Safety. In addition, two PGR projects focusing on enhancing woody perennial branching and herbaceous crop shelf life will continue. The 2007 research program also enables each regional coordinator to focus some discretionary funds on trials of specific regional interest. Most regions will use this funding to enhance weed science research.

Plans in 2007 in the **Seed Treatment Technology** area include an expansion into ornamentals where a number of fungicides will be evaluated on Coleus seeds for downy mildew control, and on ornamental Brassica for control of lepidoptera. Additionally, a very large integrated seed treatment program for onion maggot and seed corn maggot will be initiated in 2007. This program will involve several seed pelleting companies, four chemical companies (Bayer, BASF, Syngenta and DuPont) and university researchers and growers in the NE and Western US.

To address issues in specialty crops and minor uses and to help US growers to compete in international trade markets, IR-4 has initiated a joint proposal along with the Food and Agriculture Organization of the

United Nations (FAO), USDA/Foreign Agricultural Service (FAS), and EPA for a Global Minor Use Summit to be held in Rome, Italy in December 2007. The proposed objectives of the Summit include: identify specialty crop and minor use issues and address the differences in MRL regulations; discuss existing programs and initiatives that support resolution of minor use problems; and identify needs and establish a list of tasks for improving specialty crop protection and MRL regulation. The ultimate goal of the Summit is to resolve trade conflicts and facilitate export of specialty crops. This will be the very first global event on specialty crops. It will help IR-4 to take the concerns and issues of the U.S. specialty crop growers to the international community, and to initiate activities to address these concerns and issues.

The IR-4 Project Management Committee (PMC) conducted a Strategic Planning Conference in February, 2005 to obtain stakeholder input for the next planning period. The 2006 to 2008 Strategic Plan continues to target additional support for and emphasis on the Food Use and Ornamental Horticulture Programs. Other new 2006 to 2008 Strategic Plan Initiatives include an invasive pest management initiative, a Seed Technology Program and a Global Specialty Crop Initiative.

OVERALL SUMMARY

In summary, the total new food use clearances supported by IR-4 research in 2006 include: 804 new chemical clearances and 306 new biopesticide clearances for a total of 1,110 new uses. This is a single year record for a number of clearances. It should also be noted that IR-4 also supported 21 Section 18 Time limited tolerances that support 45 different uses and it is expected that IR-4 submissions will eventually make these uses permanent. The 1,110 clearances in 2006 bring the 44 year total to over 10,410.

FIELD AND LABORATORY RESEARCH COOPERATORS - 2006

The IR-4 Project is grateful to the many agricultural scientists who participated in the field and laboratory research phases of the program in 2006. Although their efforts frequently are unrecognized, their cooperation is the essential element in producing the data, field residue samples and laboratory analyses which meet EPA data requirements and conform to Good Laboratory Practice Standards. The continuing association with the minor use program of many state and federal scientists not only enhances the quality of the data but adds credibility that the objectives of the program are being met.

ATTACHMENT 9

Biopesticide Program

Early stage projects funded:

Evaluation of VacciPlant (Physpe 4), a Plant Activator for the Control of the Blossom and Shoot Blight Phases of Fire Blight
Evaluation of Vacciplant for Management of Fire Blight
Determine the Potential of Products Affecting Plant Hormones with Micronutrients for Management of Onion Thrips
Evaluation of Phomopsis amaranthicola for Palmer Amaranth Control
Raspberry Ketone Formate for Attract and Kill of Melon Fly
Enhancement of Baits for the European fire Ant With Pheromone - Phase II

Advanced stage projects funded:

Phytophthora and Rhizoctonia Control in Ornamentals with EcoGuard
Evaluation of Spinosad with Min-U-Gel, Actigel, or Splat as a Replacement for Naled and Min-U-Gel for Reduced Risk Male Annihilation Treatments (with Methyl Eugenol and Cue-Lure) against Oriental Fruit Fly and Melon Fly
Improved Thrips Management in Greenhouse Ornamentals Production
Integration of BlightBan C9-1 and BlightBan A506 plus C9-1 with Conventional Fire Blight Management
Ammonium Pelargonate as a Bioherbicide in Plasticulture
Evaluation of Bacterial Antagonists for the Control of the Blossom Blight Phase of Fire Blight
Efficacy and Compatibility of Biofungicides with Commonly Used Soil Fungicides in Production of Herbaceous Perennials
Evaluation of Serenade and Muscodor for Efficacy Against Fungal Pathogens of Ornamentals
Biopesticide Control of Citrus Red Mite, Citrus Rust Mite, and Soft-Bodied Insects in Satsuma Mandarin
Soil and Seed Treatments for the Management of Phytophthora Blight and Pythium Root Rot of Pepper
Evaluation of Yield Shield as a Seed Treatment for Ginseng
Chancellor ST and WD Efficacy for Nematode Control in Michigan
Integration of Biopesticides for Control of Cranberry Cottonball Disease and Fungicide Resistance Management
Evaluating Biopesticides for Disease Control in Grapes
Evaluating Biopesticides for Disease Control in Blueberries
Evaluation of a Biopesticide Active Ingredient, Bacillus firmus at Different Concentrations and Combinations as an Alternative to Soil Fumigation for Potato Nematode Management
Efficacy and Compatibility of Biofungicides and Reduced Risk Fungicides as Metalaxyl Alternatives for the Control of Oomycetes in Perennials
Phosphite and Biofungicide Products at the Advanced Stage of Development Evaluated for Phytophthora Blight in Pumpkin
Biological Control of Invasive Woody Weeds in Parks, Urban Areas and Landscapes with Chondrostereum Purpureum
Evaluation and Comparison of Biofungicides and fungicides for the Control of Post Harvest Potato Tuber Diseases
Mycotal for Hemlock Wooly Adelgid Management

ATTACHMENT 9 (Continued)

Proposals funded under the Demonstration program included:

Evaluation and Incorporation of the Fungus Beauvaria bassiana, for Control of Plum Curculio in Commercial Tart Cherry and Apple Production
Promoting Expanded Adoption of Biopesticide-Based Codling Moth Management Through the Use of Machine Applied Mating Disruption Formulations
Management Programs for Internal Lepidoptera in Apples Using Granulosis Virus, Pheromone Mating Disruption, and In-Season Fruit Damage Inspection
Demonstrating the Role and Assessing the Safety of Endorse for Alternaria and Botrytis Management in Ginseng
Biofungicides with Efficacy for Controlling Dollar Spot of Bermudagrass
Effectiveness of Serenade, Sonata and Prophyt Within a Biopesticide Intensive IPM System for Management of Downy Mildew on Broccoli
Integration of Serenade into Mummyberry Management Programs
Effectiveness of Serenade, Sonata and Kaligreen Within a Biopesticide Intensive IPM System for Management of Powdery Mildew on Cantaloupe
Botanical Oil, Potassium Bicarbonate, and Biofungicide Products at the Advanced or Demonstration Stage of Development Evaluated for Powdery Mildew in Pumpkin
Control of Brown Rot and Mucor Rot in Cherries with Arabesque Muscodor albus)
Application of Diallyl disulfide (DADS) to Stimulate Sclerotial Germination of Sclerotium cepivorum for the Control of White Rot of Garlic
Control of Grapevine Powdery Mildew with Biofungicides
Phosphite and Biofungicide Products at the Demonstration Stage of Development Evaluated for Phytophthora Blight in Pumpkin
Use of Phosphite Materials for Control of Pythium Species in High-Density blueberry Production Systems
Effectiveness of Biofungicides and Reduced Rate of Fungicide Application in Management of Soilborne Diseases of Peanut
Efficacy of Seed and Transplant Treatment with Streptomyces-based and Bacillus-based Biofungicides in Control of Phytophthora Blight on Chile Pepper
Efficacy of High Release Rate MCH Dispensers to Prevent Douglas-fir Beetle Infestation

IR-4 petitions/petition amendments submitted:

- 0160B Eucalyptol/Beehives
- 0052B Aspergillus flavus AF36 amendment (Conversion from conditional to permanent registration
- 0200B Chitosan Hydrolysate, Salacylic acid/All food commodities
- 0374B Zucchini Yellows Mosaic Virus Weak Strain/Cucurbits
- 0365B Tobacco Mild Green Mosaic Virus/Tropical Soda Apple
- 0327B Aspergillus flavus / Pistachio (Experimental Use Permit)-EPA and CDPR

Regulatory assistance provided, but not associated with an IR-4 Petition:

- Potassium Silicate/All RAC- Provided initial consultation and guidance

ATTACHMENT 9 (Continued)

IR-4 Biopesticide Tolerance Successes:

1) Rules - Federal Register (F.R.) – Permanent Tolerances

Pest Control Agent (Type*)	Commodity or Crop Group	PR#	Date	No. of Uses	No. of Tolerances
Sorbitol octanoate (I) All food commodities	Root and Tuber	0187B	Jan 27,2006	37	1
	Bulb vegetables	0187B	Jan 27,2006	11	1
	Leafy vegetables	0187B	Jan 27,2006	29	1
	Brassica vegetables	0187B	Jan 27,2006	19	1
	Legume vegetables	0187B	Jan 27,2006	42	1
